GOING POTTY

You don't need to be a tree hugger to help the environment with BecoPotty, Ireland's first eco-friendly potty. Made from recycled bamboo and rice husks, the BecoPotty is created by grinding the natural plant fibres into a powder and moulding them into a potty. As comfortable as an armchair for your toddler, the ergonomically designed BecoPotty is easy to use with a high back for extra support and a large splash guard to keep baby dry and potty training hygienic. The BecoPotty is also 100pc biodegradable and compostable – when you're finished using it as a potty, use it outdoors as a herb or flower planter or simply throw it into the nearest compost bin and it will start biodegrading straight away. €9.95 from www.cleverclogs.ie
